

A Carbon Footprint is...

A **carbon footprint** is historically defined as the total emissions caused by an

- individual
- event
- organization
- product

expressed as tonnes of carbon dioxide equivalent (CO₂e)

- Food
- Stuff

Calculating Your Carbon Footprint

- What do the percentages in the graph mean?
- What does the total footprint mean?
- How does it compare to the UK average and world average?
- Which area would you tackle first, e.g. if travel is the largest percentage, what could be done?

Calculating Your Carbon Footprint

- Complete the calculator and decide what actions to take to reduce your footprint.
